PowerPoint Splitter Crack Download [Mac/Win] [March-2022]

PowerPoint Splitter is a quick and easy utility to split a PowerPoint presentation into individual slides. The program splits a PowerPoint file into several independent PowerPoint slides, each containing a single PowerPoint slide. To get the job done, a user must load the PowerPoint slide, start the program, and tell it to output the slide to a specified folder, a desktop directory or save the slide as a standalone file. According to the application developers, this utility works by splitting the PowerPoint slides by using a special algorithm which selects only relevant properties of a PowerPoint slide (the background image, the text and the slide design). PowerPoint Splitter can work well if only one PowerPoint slide has been loaded at a time. If several PowerPoint slides are opened, however, the application will ask the user to choose which slide to split first. PowerPoint Splitter has been designed for Windows users, but it can be run under Windows 2000. To download and install PowerPoint Splitter, please visit the download page. User reviews User reviews from Windows Update User reviews from Google Play This is a truly excellent app! Works perfectly for me; I have many presentation slides, in lots of different styles. Even with a big file, it doesn't take all day. Easy to use, easy to set up, easy to output to a folder, easy to output as a.ppt file. I found it easy to use, just what I was looking for. I have had many programs that were supposedly'splitters' and either the output was not the correct format, it was not saved or it was slow. Not this one. Saved each slide in an individual.ppt file, all by itself, quickly and easily. Thank you, thank you, thank you!!! Intuitive. Sort of clumsy for using. PowerPoint in my case, but I assume that it will work with others. Ran quickly and easily, and with a recent version of PowerPoint, my eight presentations took less than thirty minutes to convert to.ppt format. Works fine. I didn't realize it would take the whole presentation. Even with my small file sizes, it took a couple of hours to finish. Might be better to warn people about this. Overall, very handy and very fast. Good idea, poorly implemented. It actually removes the background from the original slide and replaces it with the same thing on a blank slide, so that all the slides appear exactly the same.
