Mucinous intraductal carcinoma (MIDC) is an uncommon histologic variant of intraductal carcinoma (IDC) that represents less than 1% of all breast tumors. The prognosis of this variant is excellent, with 15-year recurrence-free survival rates of 93% to 100% and 10-year breast cancer-specific survival rates of 94% to 100%. The literature on this topic is reviewed and presented herein. [Validation of the scale of fear of falling in Spanish elderly people. Preliminary analysis of the applicability]. Fear of falling (FOF) is a significant health problem among elderly people that affects their lives as they live in their homes and in the community. A scale for measuring FOF in elderly people should be appropriate for different cultures and languages and should be validated. The objective of this study is to provide a preliminary validation of the Spanish version of the Fear of Falling scale. A sample of 129 elderly people from the population of
