In the Autocad software, choose Preferences. Select File and click on the Import tab. Click Open. Then navigate to the file you want to use. Navigate to the folder that contains your.dwg file, and select it. Click Open. Then click on Preferences, and you'll see the dialog box below. On the left, select the option for Import. In the right panel, select Save As DWG File. Select the file you just opened, and click Save. This will save the.dwg file for your model. Now that you have the.dwg file open, navigate to the File menu, and choose Export. Then choose the option for As DXF File. If you don't want to save your file, you can also just click the Export As DXF File option and skip the Export As DWG File, then open your.dwg file in your preferred CAD software and import it. Make sure the checkbox for install metadta\_xml is checked. A: The K-n-R file must be an Autocad dwg file. This can be created by first exporting your model to a dwg file using the DGN file in a normal way. Then the K-n-R file must be opened by Autocad. To do this, you must open Autocad first. If Autocad is already open, just click the file, and it will automatically open. If Autocad is not open, you need to go to a menu, and go to File > Open. Then navigate to the folder that contains the K-n-R file, and select it. You need to do this because K-n-R is a script, not just another dwg file. Then click Open.
